# HOMELIFTS

## Complete freedom in your own home

- A Homelift will help you to carry on enjoying life in your own home.
- It will quietly lift you from one floor to another in complete comfort and safety, giving you the freedom to move around your home and enjoy the benefits of true independence.
- The Homelift has been especially designed for wheelchair users and is so easy to use and to have installed.
- It is packed with features aimed at making life easier and safe for you, your family and visitors.

## Smooth and powerful

- Smooth . . . The top quality hydraulic drive will delicately lift and lower you in complete comfort and safety.
- Powerful . . . The Homelift can easily lift up to 230kg (36 stone) which means no problem for an electric wheelchair and its occupant.

*Homelifts... floor to floor with no effort  
in a matter of seconds*

*Easy entry with powered door*

*Push button control*

*Going down . . . a unique hydraulic system ensures a smooth and quiet ride*

*The lift automatically replaces the panel in the bedroom floor leaving it totally safe*

*Push a button to automatically open the door*

*Now exit and send the lift back upstairs if required*

# HOME LIFTS

*Your upstairs room is still yours to use with the lift parked out of sight downstairs.*

*When not in use, the Homelift can be parked upstairs, freeing valuable space on your ground floor.*

## Features and Options

### Safe and Sound

The Homelift is fitted with many safety features to ensure you and your family are completely safe. The lift cabin and ceiling panel are fitted with many sensitive edges to ensure the lift will stop in the event of an obstruction. The automatic hinged door is gentle in operation and can be opened or closed at the touch of a button.

### Fire protection between floors

The Homelift exceeds the British Standards BS5900 by offering fire protection in both the **up** and **down** positions. We believe it is more likely that the lift will be parked downstairs when you are in bed and so need protection from fire at all times and not just when the lift is parked upstairs.

### Power failure back-up - battery

In the event of mains power failure during use, a battery will take over and allow the lift to descend in complete safety with cabin lights "on" and will open the door. An added benefit is that all down direction sensitive edges will still operate.

### Styling and Choice

The Homelift is designed to be aesthetically pleasing and to become a small personality in the home. It is beautifully built, neat, uncluttered and a pleasure to use. The windows provide all round visibility for extra reassurance.

### Options

A telephone can be supplied and it would be your responsibility to provide a telephone extension and socket for us to connect to. A small folding seat can be supplied for those who do not wish to always use a wheelchair.

### Easy to use

The downlighting gives good visibility inside and outside the lift and can be controlled from the car or landing. The push buttons are large, easy to see and very easy to push. In case of an emergency, an alarm button is supplied as standard.

## Site Visit

We will happily visit you, without obligation or pressure, to advise you on the most suitable location for your Homelift.

## Easy Builders Work

All that is normally required is to create an aperture through the upper floor and to provide an electrical power supply.

Once this relatively simple work is completed, we will assemble your individualised Homelift in a few days and will clean up before demonstrating and handing it over to you.
